

SCORPION
PEST MANAGEMENT PTY LTD

BEFORE & AFTER SPRAY TREATMENT INFORMATION ANTS

AFTER YOUR SERVICE

- Please **DO NOT** wash hard floors and windows for up to 2 weeks after the treatment, to allow the chemical to begin working.
- Clean and sanitise your kitchen, dining areas, and other locations where food is cooked and consumed on a regular basis and food should be stored in sealed containers and kept off the floor.
- We recommend limiting the use of water on the external of the building or windows after your treatment. Any water will begin to break down the effectiveness of the chemicals.
- Washing of carpets after service will remove the treatment.
- It is common to see an influx of ants for 2-4 weeks following your treatment, this is called the 'Flushing Out' period.
- It is important to remember that pest control will reduce the pest populations substantially, but you may still see ants that have yet to cross the chemical barrier.
- Painting the internal or external of the home after the service, will render the treatment useless.
- New mulch/rocks and weed mats will affect the treatment.
- Vegetation should not be touching the home, gutter or eaves, and should be trimmed back regularly.
- Bait acceptance is a process that takes time.

PRIOR TO YOUR SERVICE

- It is important to complete a thorough clean of your property before we attend. This would include areas internal such as vacuum & mopping of floors, cleaning benchtops, food items put away, clothing & toys lifted off floors, small items moved away from the internal and external walls, lawns mowed, pathways swept and clear of any clutter and washing removed from clothesline.
- Ensure technician has access to all areas of the property that is being treated, this may include the sub floor, roof cavity, sheds & outside areas.
- Pet areas are required to be cleaned up and is a priority (e.g. dog faeces, kitty litter) and remove animal bowls/water until treatment is finished.
- If you have any fish or reptiles, ensure the tank is covered with a towel and any fish ponds are covered with a tarp.
- Please keep animals at a distance whilst service is being carried out & allow chemical to dry prior to allowing animals access to treated areas.
- If you have young children, (particularly at crawling stage) it is recommended that you leave the premises while the treatment is undertaken and up to 2 hours post treatment.
- If a member of the household is pregnant or has respiratory problems, it is recommended that they leave the premises whilst the treatment is being carried out and up to 2 hours post treatment.
