PEST MANAGEMENT PTY LTD

Customer Prepare & Post treatment Tips

Spiders, Ants & Millipedes– General Treatment

The Pest technicians will complete a comprehensive inspection of the property to determine the best method of application. A general Ant & Spider spray will include:
Spraying the Eaves – Windows frames – Doors – internal/external walls – Garages – Wall cavity – under house

Prior to your service

- Complete a general cleaning of your property.
- Remove food items from bench tops and cover any Pet food and water.
- Ensure Pest technician has access to all areas of the house that is being treated, this may include under the floors, roof cavity and sheds.
- If you have any fish or reptiles, ensure the tank is covered with a towel.
- If you have dogs or cats, ensure they are removed whilst the technician completes the service, you may wish to separate them in a pen, on a lead, or leave the premises.
- You may wish to mop any hard surfaces prior to treatment.
- Don't remove webbing from eaves etc. until 2 weeks after the treatment.
- If you have young children, (particularly at crawling stage) it is recommended that you leave the premises while the treatment is undertaken and up to 2 hours post treatment.
- If a member of the household is pregnant or has raspatory problems, it is recommended that they leave the premises whilst the treatment is being carried out and up to 2 hours post treatment.

Post Treatment

- Please don't wash hard floors and windows for up to 2 weeks after the treatment, to allow the chemical to begin working.
- Allow 1-2 weeks after the treatment to clear the cob webs from eaves etc.
- Don't hose close to the external of the building or windows within two weeks of the treatment being carried out, to allow time for the chemical to work. You may wish to use a cloth or squeegee.
- You may still see insects for up to 2 weeks after the treatment, as they respond to the chemical. Larger insects like huntsmen and Scorpions may take longer.
- Painting the internal or external of the home after the service, will render the treatment useless.
- New mulch/rocks and weed mats will affect the treatment.
- Washing carpets shortly after treatment will reduce its effectiveness.
