

Customer Prepare & Post treatment Tips

Cockroaches

The Pest technicians will complete a comprehensive inspection of the property to determine the best method of application for the cockroach infestation.

Prior to your service

- Complete a general cleaning of your property.
- Remove food & water items from bench tops and animal bowls until treatment is finished.
- Ensure Pest technician has access to all areas of the house that is being treated, this may include under the floors and in the roof cavity.
- If you have any fish or reptiles, ensure the tank is covered with a towel.
- If you have dogs or cats, ensure they are removed whilst the technician completes the service, you may wish to separate them in a pen, on a lead, or leave the premises.
- You may wish to mop any hard surfaces prior to treatment.
- If you have young children, (particularly at crawling stage) it is recommended that you leave the premises while the treatment is undertaken and up to 2 hours post treatment.
- If a member of the home is pregnant or has respiratory problems, it is recommended that they leave the premises whilst the treatment is being carried out and up to 2 hours post treatment.

Post Treatment

- Please do not wash hard floors and windows for up to 2 weeks after the treatment, to allow the chemical to begin working.
- You may still see insects from time to time, this is normal. Please allow time for them to pass over the chemical barrier.
- Painting the internal or external of the home after the service, will render the treatment useless.
- Washing carpets shortly after treatment will reduce its effectiveness.
- Occasionally you may need a follow up treatment depending on the severity of the infestation.
