Wildlife Control

We are committed to taking care of the Tasmanian native and protected wildlife and all animals surrounding your home including, wabbabys, possums, deer and rabbits.

Possums

A common issue

Possums are protected in Australia and there are very strict guidelines in places regarding what can and can't be done. Brush tail possums and ring tail possums are fully protected in Tasmania, you can only trap possums if you have a permit from DPIWPE.

Why it's important that professionals remove possums

If caught with a possum in a trap/cage you can be fined 10's of thousands of dollars; this is where Scorpion Pest Management can be of assistance as we are fully licensed to remove troublesome possums.

Snakes

There are three species of snakes found in Tasmania: Tiger, Lowland Copperhead and White-lipped. All three Tasmanian species are capable of injecting venom, although the venom of the White-lipped snake has never been recorded as causing death to a human. All Tasmanian snakes bear live young (viviparous). Larger snakes produce more young than smaller females of the same species. There is no maternal bonding between the young and adults. In fact, Copperheads are well known to be cannibalistic, even eating their own babies. All three Tasmanian species are capable of injecting venom.

The process of trapping

First, we will full inspect your property and provide you with the best option or options along with a quote. If you require trapping, we will set the traps in high activity areas and return after 24-48 hours to check them. (methods will differ depending on the type of wildlife)

Scorpion has permits for wildlife control and work closely with the DPIWPE (Department of Primary Industries, Parks, Water and Environment). We can remove unwanted ducks and birds either domestic or protected. We can arrange, with DPIWPE's help, permits to remove these for you.
