

## Customer Prepare & Post treatment Tips

### Scorpions

The Pest Technicians will complete a comprehensive inspection of the property to determine the best method of application. Scorpions do require a stronger chemical application because they are larger arachnoids.

#### Prior to your service

- Complete a general cleaning of your property.
- Remove food items from bench tops and cover any Pet food and water.
- Ensure Pest Technician has access to all areas of the house that is being treated, this may include the sub floor, roof cavity and sheds.
- If you have any fish or reptiles, ensure the tank is covered with a towel.
- If you have dogs or cats, ensure they are removed whilst the technician completes the service, you may wish to separate them in a pen, on a lead, or leave the premises.
- You may wish to mop any hard surfaces prior to treatment.
- If you have young children, (particularly at crawling stage) it is recommended that you leave the premises while the treatment is undertaken and up to 2 hours post treatment.
- If a member of the household is pregnant or has respiratory problems, it is recommended that they leave the premises whilst the treatment is being carried out and up to 2 hours post treatment.

#### Post Treatment

- Please do not wash hard floors and windows for up to 2 weeks after the treatment, to allow the chemical to begin working.
- Do not hose close to the external of the building or windows within two weeks of the treatment being carried out, to allow time for the chemical to work. You may wish to use a cloth or squeegee.
- You may still see insects from time to time, this is normal. Please allow time for them to pass over the chemical barrier. Larger insects like Scorpions may take longer to die.
- Painting the internal or external of the home after the service, will render the treatment useless.
- New mulch/rocks and weed mats will affect the treatment.
- Washing carpets shortly after treatment will reduce its effectiveness.
